

Meet a star in UV systems . . .

... with 30 years of experience

With Nordson UV, you get 30 years of experience that comes from designing, installing and supporting more than 10,000 UV systems worldwide. Experience like that means you can trust us to be a complete, reliable source for some of the most advanced microwave and electrode-powered UV curing and drying systems available. Nordson UV is part of Nordson Corporation, the world's leading producer of precision dispensing equipment.

To find out how you can put our star power to work for you, call 800.524.1322, e-mail us at uvcuring@nordson.com or visit us on the Web at www.nordsonuv.com.

Now you have a choice . . .

... in UV systems

Introducing CoolWave® – microwave-powered UV curing systems from Nordson that can meet your most demanding production requirements.

CoolWave delivers:

- Proprietary reflectors with a two-year warranty.
- Cooler operation with precisely focused UV light.
- Less maintenance and longer service life.

Contact us today to make the reliable choice with Nordson UV. Call [800.524.1322](tel:800.524.1322), e-mail us at uvcuring@nordson.com or visit us on the Web at www.nordsonuv.com.

Less heat. Real cool . . .

...with the CoolWave[®] Microwave-Powered UV Curing System

Less heat means cooler surface temperatures on the products you are curing. A proprietary dichroic-coated reflector reflects less of the damaging, heat-generating infrared light waves back to the substrate. The result is precisely focused UV light. And cooler operation.

To learn more about real cool UV curing operations, call [800.524.1322](tel:800.524.1322), e-mail us at uvcuring@nordson.com or visit us on the Web at www.nordsonuv.com.

*No arcs.
No sparks.
No gasketing...*

... now that's a reason to celebrate

No internal gasketing means no arcing or sparking. And that means less maintenance. The new CoolWave® UV curing systems eliminate the maintenance-intensive internal gasketing in the microwave cavity. That reduces your operational and maintenance costs, as well as expensive downtime related to internal arcing.

Join the UV celebration.

UV systems with less maintenance . . .

...to keep your line running

Avoid costly downtime with your UV curing systems. Move up to the systems that require less time to maintain than conventional microwave-powered systems. With Nordson's CoolWave® systems, you get:

- Harder, more scratch-resistant reflectors for ease of cleaning and longer service life.
- No internal gasketing to eliminate arcing and sparking.
- Cooler operation for less overheated components.
- Fewer, easy-to-access parts.

To learn more about systems that can keep your UV line online, call 800.524.1322, e-mail us at uvcuring@nordson.com or visit us on the Web at www.nordsonuv.com.

UV systems that are a cut above . . .

...with durability that's guaranteed

The new Nordson CoolWave® curing systems feature proprietary reflectors constructed of temperature-stable glass with an engineered dichroic coating. That makes them harder, more scratch-resistant and more heat stable than metal. That also means easier cleaning and longer service life. And, the reflectors are backed by a two-year warranty.

Find out more about the UV systems with durability you can trust. Call [800.524.1322](tel:800.524.1322), e-mail us at uvcuring@nordson.com or visit us on the Web at www.nordsonuv.com. Watch for another Nordson postcard soon. It's your chance to win one of many cool prizes when you visit booth #816 at e/5 (formerly RadTech).
