

## Small Footprint. **Big Features.**

### **Save space with the new compact, economical Nordson EcoDry™ Compound Dryer.**

With its compact size, the new EcoDry Compound Dryer requires only a fraction of the floor space of conventional dryers. Plus, it's specially designed for drying water-based end compounds so you can comply with VOC emission standards.

The EcoDry Compound Dryer features Nordson patented induction-heating technology, which means a 50 to 70% reduction in energy consumption over conventional ovens. The system heats only the can ends, not the air around them. Compounds dry from the metal out, making the drying process faster, more complete and less expensive for smaller production lines with end requirements up to 6:10 (168mm) diameter.

An instant on/off feature means no pre-heating and it can be turned off completely during line interruptions.

You also get a system that's easy to operate and maintain. Heating is automatically controlled with minimal operator intervention. During start-up, a PLC unit performs an internal self-diagnostic check for proper operation. Heating and safety components are continuously monitored for fast troubleshooting and safe, reliable operation.

To find out more about the small dryer with big features, call Nordson Container Systems at 440-985-4000 or visit us on the Web at [www.nordson.com/container](http://www.nordson.com/container).
